1 Highlights

- Edge locations are endpoints for AWS which are used for caching content. Typically this consists of CloudFront, Amazon's Content Delivery Network(CDN). There are many more edge locations than regions. Currently, there are over 150 edge locations.
- A region is a physical location in the world which consists of two or more availability zones.
- An AZ is one or more discrete data centers, each with redundant power, networking and connectivity, housed in separate facilities.
- Edge locations are endpoints for AWS which are used for caching content. Typically this consists of CloudFront, Amazon's Content Delivery Network (CDN).
- High level services which you should focus (Core services in bold):
 - **Compute**
 - **Storage**
 - **Databases**
 - Migration and Transfer
 - **Network and Content Delivery**
 - Management and Governance
 - Machine Learning
 - Analytics
 - **Security, Identity and Compliance**
 - Desktop and App Streaming
